The culture and preparation of tea

In Assam and China the leaf has quality and flavour in the spring and autumn, when the atmosphere is dry. Similarly in Ceylon, the best quality teas are made in the dry months. In countries like Java and Kenya, where the seasons are not marked and growth is steady throughout the year, there is no definite quality period. It would appear that quality in tea goes with xeromorphic leaf growth that is a form of growth designed to cope with a dry atmosphere and water shortage. This agrees with the observation that plants with pubescent (hairy) leaves give quality teas, for such plants are designed by nature to withstand dry conditions.

The table below shows the monthly crop distribution in Upper Assam where in many respects the climate is ideal for tea; in South India where only the areas served by the fierce south-west monsoon are dealt with; in Java and the Kericho district of Kenya where an equable climate throughout the year is experienced; and in Cholo, Nyasaland where moderate rainfall for five to six months is recorded whilst for three months the weather is not and very dry.

Country	Up to the Month	Year – 2026	Year – 2025	Up to Month (+/-)
Bangladesh	August	57.91	49.5	8.41
North India	August	690.7	689.4	1.3
South India	August	149.5	155.1	-5.6
Sri Lanka	August	171.2	175.8	-4.6
Kenya	May	252.2	240.8	11.4
Malawi	July	30.0	32.8	-2.8
Rwanda	June	22.1	22.3	-0.2
